Coding 6 — Heterogeneous Collection

Polimorfisme dalam Pemrograman Gim (C#) • File kode: MainClass.cs

```
using System;

namespace GamePolymorphism
{
    public class MainClass
    {
        public static void Main(string[] args)
        {
            Hero[] arrHero = new Hero[3];

            Knight k = new Knight();
            k.name = "Arthur";
            k.baseDamage = 100;
            k.bonusArmor = 50;

            Wizard w = new Wizard();
            w.name = "Merlin";
            w.baseDamage = 80;
            w.bonusMagic = 150;

            arrHero[0] = k;
            arrHero[1] = w;
            arrHero[2] = new Knight
            {
                name = "Lancelot",
                baseDamage = 120,
                bonusArmor = 80
            };

            foreach (Hero h in arrHero)
            {
                h.UseSkill();
                Console.WriteLine();
            }
        }
    }
}
```
